

LOLLIPOP SETUP

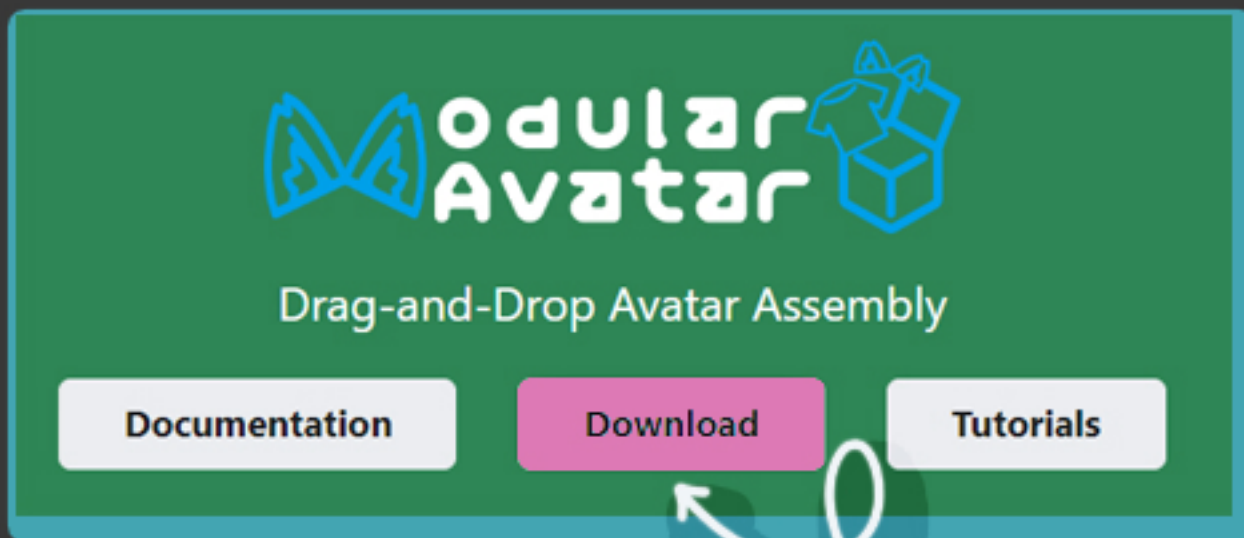

This is how it works:

1

Install the latest version of Modular Avatar

<https://modular-avatar.nadena.dev/>

2

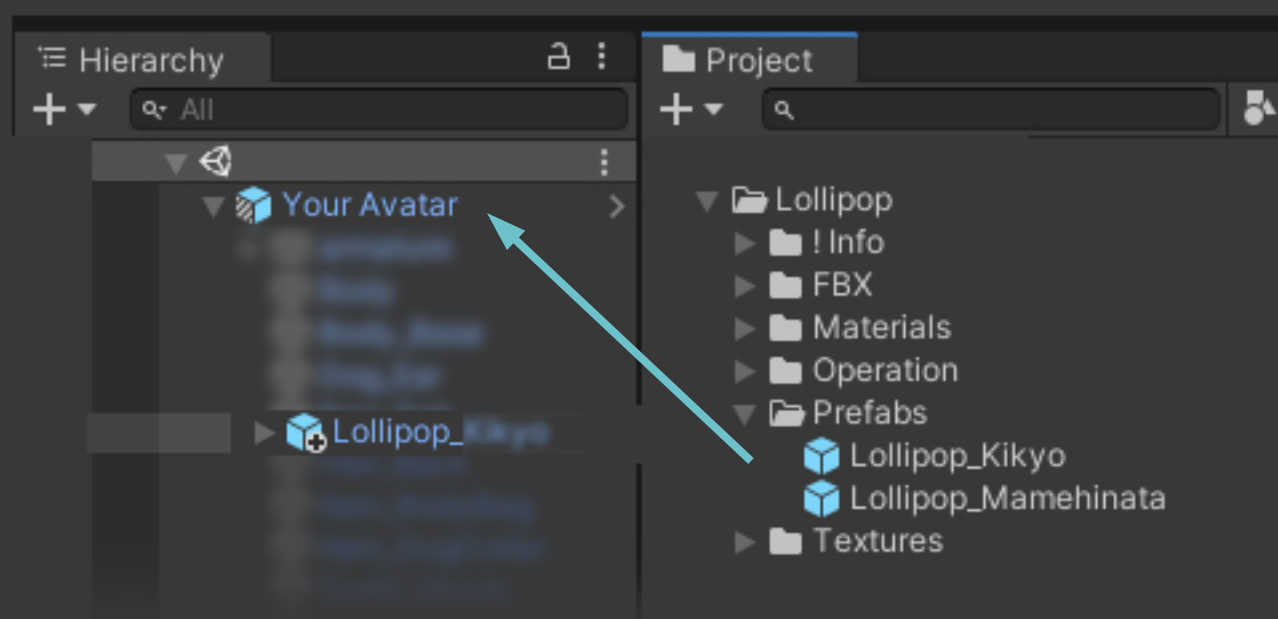

Install the latest version of lilToon Shader

[lilToon https://lilxyzw.booth.pm/](https://lilxyzw.booth.pm/)

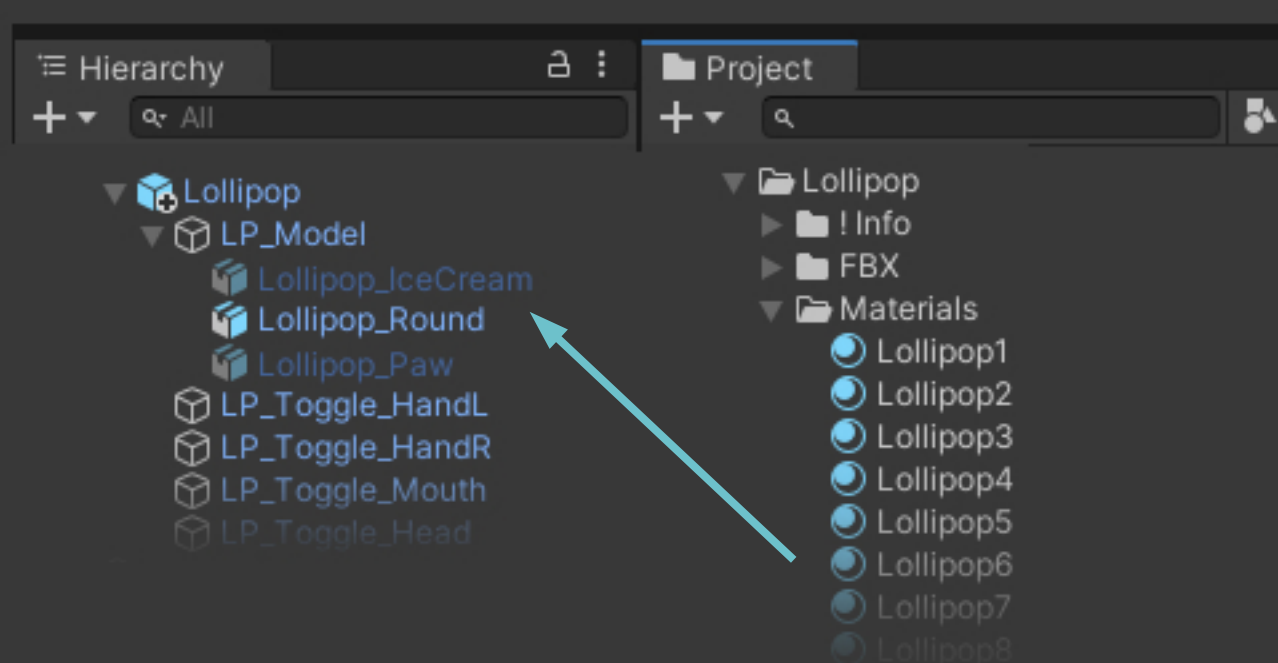

3

Drag the 'Lollipop' prefab onto your avatar

4

Choose your favourite colour variation from the 'Materials' folder, drag it onto the models.

Toggle the visibility of the models on and off to see what they look like individually.

...and you're done.

Comment:

The prefabs are made for the Mamehinata, Kikyo, Anon and Muromu avatars, but can be used for **ANY AVATAR**, just move the 'LP_Toggle' to the right places.
